

## SETUP

- Ensure that the headset is fully charged (It is ok to charge while storing)
- Wipe face cushions with antibacterial wipe (DO NOT USE ON LENSES)
- Wipe the inside and outside lenses with the microfiber cloth
- Turn headset on, confirm volume is up, and launch the experience (DO NOT CREATE BOUNDARY)

## DEPLOYING HEADSETS

Quick start guide to getting your users comfortably into the headset and experience:

1

### Place the headsets for use

Place your prepped headset where your user will be sitting. Confirm the experience is ready to go by confirming the “look forward” message pops up when you put on the headset.

2

### Help the user get comfortable

Allow the user to place the headset on themselves. Suggest that they can adjust comfort and clarity by moving the headset up or down on their eyes and tightening with the knob on the back. We also recommend that they raise their hand if they need help during the experience.

3

### Help the user after the experience

When the experience is complete, you may want to help the user out by loosening the dial on the headset. As they take it off, you can help place it gently back down on the table. The experience will autoreset after its been off a head for 10 seconds.

4

### Clean the headset for the next use

Once a user is done, prep for the next user or storage by sanitizing the cushions that touch a users skin as well as using the microfiber cloth to clean the lenses. DO NOT use the antibacterial wipes on the lenses.

## END/STORAGE

- Once deployment is complete, power down the headset by long holding the power button on the left side until you hear the power down chime.
- Give a final lens wipe and sanitation so that it is ready for the next deployment.
- Put the headset and other equipment back in the case and gently close and lock.
- When possible, plug the headsets in to fully charge for next use.
